Key Questions and Issues

- ⌘ What is GIS?
- ⌘ What are the applications of GIS?
- ⌘ How is the real world represented in GIS?
- ⌘ What analyses can GIS performed?

M. Helper
09-03-13 Geo327G/386G UT Austin 2

GIS = Geographic Information System(s)

- ⌘ Computerized management & analysis of geographic information
- ⌘ Group of tools (and people) for collection, management, storage, analysis, display and distribution of spatial data & information
- ⌘ Computer-based tool for mapping and analyzing things that exist and events that happen
- ⌘ Others, e.g. Bolstad

M. Helper
09-03-13 Geo327G/386G UT Austin 3

GIS is to geographic analysis as:

- ⌘ Typewriter → Word Processor
Automation
- ⌘ Pen & Ink → C.A.D.
Storage, Editing
- ⌘ Almanacs → Climate Models
Prediction, Analysis

⌘ Light Table → G.I.S.
Map Overlay Analysis, Pattern Recognition

Historical Development –GIS timeline

- ⌘ **1963-1977 Innovation**
 - ☒ Canadian Land Inventory system, Harvard Graphics & S.A. Lab, US Census Bureau, ERTS-1 (Landsat 1)
- ⌘ **1981-1999 Commercialization**
 - ☒ ArcInfo, GPS, MapInfo, TIGER, NSDI, MapQuest
- ⌘ **2000-present Exploitation**
 - ☒ >\$7 billion industry, >1 million users

M. Helper
09-03-13

Geo327G/386G UT Austin

5

Components of a GIS

- ⌘ **Network**
- ⌘ **People**
 - ☒ ~50,000 professionals in US, 2005
- ⌘ **Hardware**
- ⌘ **Software**
 - ☒ ~ \$1 billion annual sales in 2000
- ⌘ **Data**
 - ☒ >\$4 billion/yr by gov. agencies

M. Helper
09-03-13

Geo327G/386G UT Austin

6

Demand for GIS Professionals

- ⌘ **In the U.S. in 2005:**
 - ☒ ~500,000 using GIS as part of job; growing at 15% each year.
 - ☒ Job market demand is ~75,000/year
 - ☒ ~50,000 US students/year take a GIS class
 - ☒ 4000 “certified” graduates/year

Geo327G/386G UT Austin

8

A GIS is Composed of Layers

Geology

D.E.M.

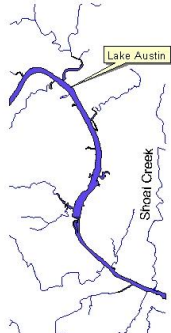

Hydro.

Roads

M. Helper 09-03-13 Geo327G/386G UT Austin 9

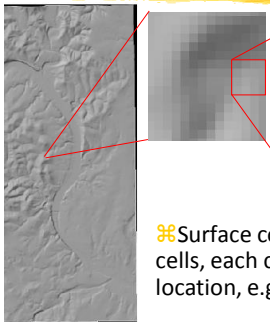

Layers contain *Features* or Surfaces

- ⌘ Features are geographic objects represented by a point, line or polygon
- Polygons (filled or unfilled) for things large enough to have boundaries
- Lines for things too narrow to be polygons
- Points for things too small to be polygons

M. Helper 09-03-13 Geo327G/386G UT Austin 10

Layers contain Features or *Surfaces*

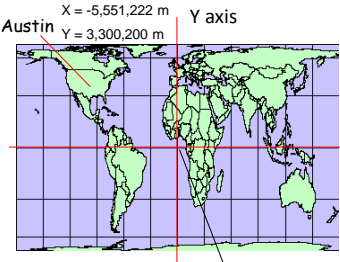

565	573	582	590
575	580	595	600
579	581	597	601
580	600	620	632

⌘ Surface composed of matrix of square cells, each containing a value for its location, e.g. elevation.

M. Helper 09-03-13 Geo327G/386G UT Austin 11

Features have locations

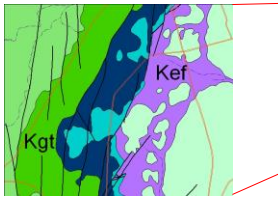

Austin X = -5,551,222 m Y = 3,300,200 m

Origin (0, 0)

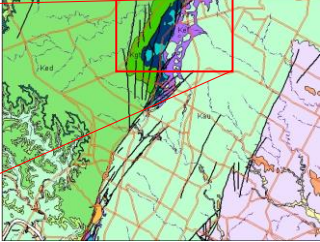

- ⌘ Coordinate Systems can be orthogonal or "warped" (projected)
- ⌘ GIS software transforms coordinates from one projection to another

M. Helper 09-03-13 Geo327G/386G UT Austin 12

Features can be displayed at different scales

1 : 40,000

1 : 150,000

⌘ Zooming, scaling, variable detail rendering

M. Helper 09-03-13 Geo327G/386G UT Austin 13

Features are linked to information

Length	Centroid	Street_name	Street_dir	Stl_cd	Alc	Type
1987.841	1379	CAPITAL OF TEXAS	HWY	N	0	MAJOR
530.507	2028	BEE CAVES	RD		0	MAJOR
609.973	926	F M 2222	RD		0	MAJOR
155.524	3851	MO-PAC	EXPY	N	0	MAJOR
6065.322	346	CAPITAL OF TEXAS	HWY	N	0	MAJOR
1022.475	968	CAPITAL OF TEXAS	HWY	N	0	MAJOR
2459.327	965	F M 2222	RD		0	MAJOR
228.862	2118	BEE CAVES	RD		0	MAJOR
779.617	2148	BEE CAVES	RD		0	MAJOR
210.440	2088	BEE CAVES	RD		0	MAJOR
2916.411	3852	MO-PAC	EXPY	N	0	MAJOR
4200.000	1458	CAPITAL OF TEXAS	HWY	N	0	MAJOR

⌘ Every Feature (e.g. road) has several **Attributes** (e.g. name, length) in an **Attribute Table**.

M. Helper 09-03-13 Geo327G/386G UT Austin 14

Spatial relationships can be queried

- ⌘ What crosses what?
- ⌘ Proximity – What is within a certain distance of what?
- ⌘ Containment - What's inside of what?
- ⌘ Which features share common attributes?
- ⌘ Many others

M. Helper 09-03-13 Geo327G/386G UT Austin 15

Applications

- ⌘ What is where?
 - ☑ Query and info. retrieval – e.g. MapQuest, Google Maps
- ⌘ What geographic patterns exist?
 - ☑ E.g. Geostatistics; e.g. prediction of ore grades from limited data
- ⌘ Where have temporal changes occurred?
 - ☑ E.g. LULC change, water table levels, morphologic studies
- ⌘ Where do certain conditions apply?
 - ☑ E.g. suitability analyses – “where is the best place for...”
- ⌘ “What if” forward modeling; what are spatial implications for certain actions?
 - ☑ E.g. mine reclamation

M. Helper 09-03-13 Geo327G/386G UT Austin 16

The Five M's

- ⌘ Mapping
 - ☑ Accuracy, Reproducibility, Portability, Customization
- ⌘ Measuring
 - ☑ Automation, Accuracy
- ⌘ Modeling
 - ☑ Scaling, Verifiability, Analytical Tools
- ⌘ Monitoring
 - ☑ Automation, Flexibility
- ⌘ Management
 - ☑ Storage, Updating, Data Integrity, Security

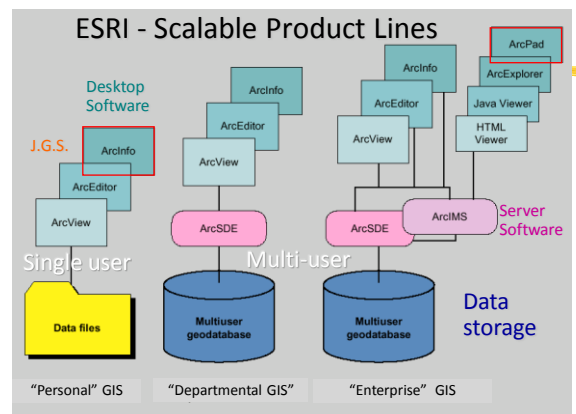

GIS Advantages:

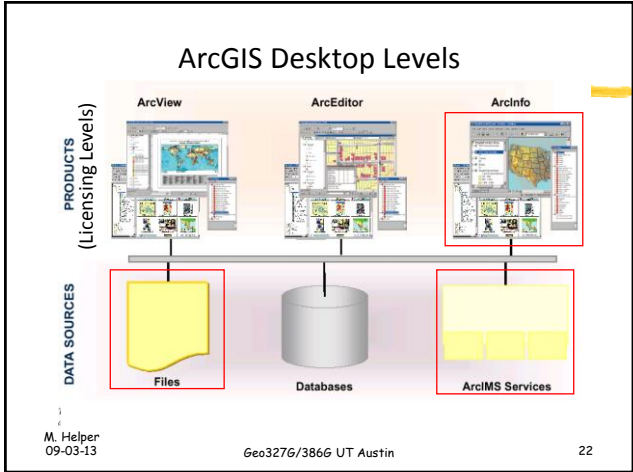

- ⌘ Manage & organize vast amounts of geospatial data
 - ☑ Rapid updating, info. dispersal
- ⌘ VERIFIABLE methods
- ⌘ Modeling, hypothesis-testing, PREDICTION
- ⌘ Automate & customize map production

GIS Drawbacks

- ⌘ Errors play significant role in queried results – not always apparent
- ⌘ Abstract concepts difficult to implement – different approaches may yield different answers
- ⌘ Pretty pictures can obscure uncertainties – promotes uncritical thinking, black-box approach

ESRI - Scalable Product Lines

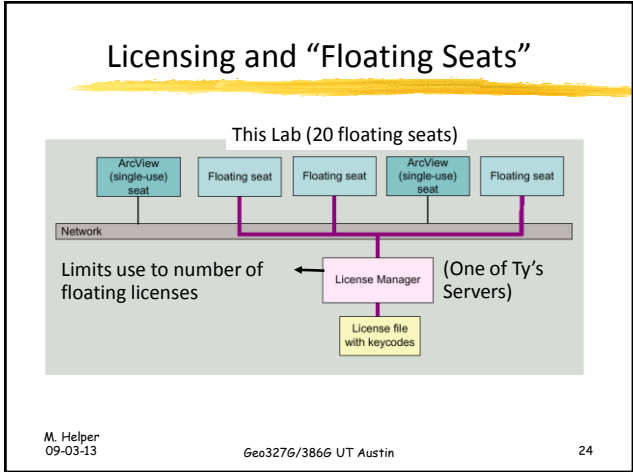

ArcGIS Licensing Levels

- ⌘ **ArcView** – Make maps, do queries, some spatial analysis, some editing (shapefiles, personal geodatabases) – included with GTK ArcGIS Desktop
- ⌘ **ArcEditor** – plus edit multi-user geodatabases; more tools in toolbox
- ⌘ **ArcInfo** – full functionality; comes with ArcInfo Workstation (i.e. legacy version ArcInfo v. 7). *UT D.G.S. licenses.*
- ⌘ Current ArcGIS = v. 9.3

M. Helper 09-03-13 Geo327G/386G UT Austin 23

ArcGIS Extensions

	ArcView, ArcEditor, and ArcInfo	+	ArcInfo only
