

Figure 4. Geological map and cross section of 4 units that strike N-S and dip W. 300' and 400' foot strike lines for the upper contact of the white unit are shown. The 300' strike line is W of the 400' strike line, as it must be if the units dip W. Parallel strike lines with the same spacing could also be drawn for the upper contact of the dark gray unit (at 200' and 300') and the medium gray unit at (400' and 500'), indicating that all contacts are planar and parallel.
