

Sample descriptions

2nd version, 22 April 02

This database includes analyses of Trans-Pecos Cenozoic igneous rocks made available in publications, theses, and dissertations from 1970 onward. That year was picked as the earliest for which meaningful trace-element data are regularly available in rock analyses from this magmatic province, although many analyses continued to be made without trace elements. Numbers at the end of each description are keyed to the list of references. When data for a sample have been published more than once, only the latest reference, commonly with augmented trace-element data, is cited. For some analyses no reference is cited because the analyses, made by the late G. Karl Hoops in The Department of Geological Sciences, the University of Texas at Austin, have never appeared in publications, theses, or dissertations.

Samples are grouped according to age (known or estimated) as 48-38Ma, 38-26Ma, and 26-17Ma. Within each age group they are listed in order of increasing SiO₂' (SiO₂ calculated after major oxides are normalized to 100%, volatile-free). Alphanumeric sample descriptors are those of the original authors, with a few exceptions to avoid ambiguities. Analytical techniques and laboratories are so diverse that the cited reference must be consulted for these.

The abbreviation following the sample descriptor is the rock name assigned according to the total alkali-silica classification diagram (LeMaitre, R.W., ed., 1989, A Classification of Igneous Rocks and Glossary of Terms. Oxford, Blackwell, 193pp).

Te-bas = tephrite/basanite

PT = phonotephrite

TP =-tephriphonolite

PH = phonolite

B = basalt

TB = trachybasalt

BTA = basaltic trachyandesite

TA = trachyandesite

T = trachyte

R = rhyolite

No analysis plots as foidite, basaltic andesite, andesite, or dacite. Most Trans-Pecos igneous rocks, even the intrusive ones, are fine-grained, so this classification was applied to all as a uniform compositional indicator. CIPW norms are not used here because in most newer analyses ferrous and ferric iron are not separately measured. Tephrite and basanite cannot be distinguished without normative or modal data, so these are lumped. Because the designations of hawaiite, mugearite, and benmoreite are

sensitive to Na/K ratios, these types are lumped with the more generic terms, respectively trachybasalt, basaltic trachyandesite, and trachyandesite. These arbitrary decisions reduce the number of instances in which different samples from the same rock body are given different rock names because of minor differences in analytical results for alkalis.

For most samples, ages (*from that unit*, not necessarily that sample) are given, without estimated uncertainties or dating methods. The referenced source must be consulted for these. Longitude and latitude (to decimal fractions of minutes) are given unless sample localities were too vague to estimate these. For some widespread pyroclastic flow deposits, the longitude and latitude of the vent area, not the sample location, are indicated with asterisks. Samples are not included in this data base if they are not specified as from a named intrusive body or stratigraphic unit *and* do not have a precise locality.

Weight percent oxides follow, then SiO₂' and (Na₂O + K₂O)' (both coordinates for the total alkali-silica classification diagram). Trace elements (in ppm) follow. Aberrant values of oxides and trace elements are marked with asterisks. Some calculated trace-element ratios are included; rare earth element ratios Eu* and Ce_n/Yb_n are normalized to average chondrite of Anders and Grevesse (1989). Finally, initial ⁸⁷Sr/⁸⁶Sr ratios and measured ratios of Nd and Pb isotopes are listed. However, these entries are intended merely as indicators that isotopic data are available, and the original sources must be consulted for analytical conditions and uncertainties.

Inevitably there are errors of omission, transcription, and judgement in this compilation for which I alone am responsible. To offer corrections and new data, contact me at danbarker@mail.utexas.edu I hope to post a revised version at least once a year.

TPC420	R, basal vitrophyre of Pine Canyon Rhyolite on Pine Canyon trail, BBNP. 6
921102	R, upper Burro Mesa Rhyolite, west flank Burro Mesa, BBNP. 56
H92-64	R lava, Leyva Canyon Member, Rawls Formation. 24
81-60	R, Sierra Blanca laccolith. 60
H92-52	R, rim sill or related lava, Solitario. 24
H91-193	R lava, Leyva Canyon Member, Rawls Formation. 24
RT-1	R intrusive Round Top, Sierra Blanca group. 43
7-25	R, Burro Mesa Rhyolite at Goat Mountain, BBNP. 9
MGE781	R, tuff filling Infiernito caldera. 28
81-65	R, Little Blanca intrusion, Sierra Blanca group. 62
MGE783	R, ash-flow tuff, Infiernito caldera. 62
QM 152	R dike north of Pinnacle Peak, Quitman Mountains. 65
Chin 431F	R, Upper Rhyolite, Tinaja Prieta Canyon, Chinati caldera. 18
LBM2	R intrusive, Little Blanca, Sierra Blanca group. 60
MGE787	R, postcaldera, Infiernito caldera. 32
MGE776	R, Infiernito caldera. 28
951	R, Santana Tuff, on River Road 8 miles NW of Big Hill. 23
M358	R, Santana Tuff, Canon de Lobos. 23
Blanca-1	R intrusive, Sierra Blanca laccolith. 3
H88-101	R lava dome, Terneros Creek Rhyolite. 24
52-D	R, San Carlos Tuff. 18
Sant-2	R, Santana Tuff. 18
MGF 006	R ash-flow tuff, Mitchell Mesa Rhyolite, Cleveland Peak section. 28
70-187	R lava dome, similar to Burro Mesa Rhyolite, Emory Peak, BBNP. 9
M357	R, Santana Tuff, Canon de Lobos. 23
H88-97	R lava dome, Terneros Creek Rhyolite. 24
TPC 301	R, Hayes Ridge ring dike NW of Nugent Mountain, BBNP. 6
U94-R116A	R lava, Leyva Canyon Member, Rawls Formation. 72
MGE 798	R, Infiernito caldera. 28
H89-76	R lava, Star Mountain Formation, Davis Mtns. 25
953	R, Santana Tuff. 23
MGE 789	R, postcaldera, Infiernito caldera. 32
M356	R, Santana Tuff, Canon de Lobos. 23
H88-13	R lava dome, Terneros Creek Rhyolite. 24
4021	R, Santana Tuff. 23

561	R, Santana Tuff. 23
TPC 372	R, Chinese Wall dike, head of Juniper Canyon, BBNP. 6
LDA-X	R, vitrophyre, Santana Tuff. 18
TPC 324	R lava dome, upper unit, top of Emory Peak, BBNP. 6
H82-48	R lava dome, Fresno Formation. 24
H88-18	R lava dome, Terneros Creek Rhyolite. 24
H88-100	R lava dome, Terneros Creek Rhyolite. 24
RTR-1	R intrusive, Round Top, Sierra Blanca group. 43
MGE 621	R ash-flow tuff, Mitchell Mesa Rhyolite. 28
Mitch-3	R ash-flow tuff, Mitchell Mesa Rhyolite. 11
H81-81	R, Infiernito caldera. 28
W96-22	R lava, Leyva Canyon Member, Rawls Formation.. 72
MGE 620	R ash-flow tuff, Mitchell Mesa Rhyolite. 28
MGE 617	R ash-flow tuff, Mitchell Mesa Rhyolite. 28
W96-24	R lava, Leyva Canyon Member, Rawls Formation.. 72
MGE 619	R ash-flow tuff, Mitchell Mesa Rhyolite. 28
MGE 618	R ash-flow tuff, Mitchell Mesa Rhyolite. 28
Mitch 4	R ash-flow tuff, Mitchell Mesa Rhyolite. 12
H88-99	R lava dome, Terneros Creek Rhyolite. 24
MGF 038	R dike, Chinati Mountains. 28

26-16 Ma, 40-52%SiO₂

H82-76	Te-bas. 37
E90-19	TB lava, Las Burras Lavas, Rawls Formation. 24
H92-80	TB lava, Closed Canyon Formation. 24
H90-68	Te-bas lava, Leyva Canyon Member, Rawls Formation. 24
SI 8377	B, intrusion south of Black Hills. 19
DM 104	TB dike, Forbidden Mountain, Davis Mtns. 71
E90-28	TB lava, Las Burras Lavas, Rawls Formation. 24
E90-15	Te-bas. Closed Canyon Formation. 24
Tib-1	B intruding upper Rawls Formation. 37
E90-16	TB lava, Closed Canyon Formation. 24
H-1a	TB intrusive, same locality as 8204 and 8203. 49
8204	TB intrusive, containing ultramafic xenoliths, on county road north of Sawmill Mountain. 23
DM 102	TB, intrusive plug, Indian Cave Canyon. 71
H82-83	Te-bas. 37
H91-132	B lava, Closed Canyon Formation. 24
BM 10	TB lava, Closed Canyon Formation, 11.7 miles N of turnoff on road to Big Bend Ranch. 23
H91-127	TB lava, Closed Canyon Formation. 24
H-2	B intrusive, bearing ultramafic xenoliths, ~1km SSE of Pinks Peak. 49
SI 8374	TB intrusion south of Black Hills. 19
Tr 32	TB lava. Las Burras Lavas, Rawls Formation, top of section measured south of cave. 69
H92-19	Te-bas intrusive. 24
H91-133	Te-bas lava, Closed Canyon Formation. 24

8203	TB intrusive, same body as H-1a and 8204. 14
H85-38A	Te-bas. 20
Tr 33	B lava, Las Burras Lavas, Rawls Formation, same flow as sample Tr 32 but below it. 69
PW84002	TB dike, Payne's Waterhole area. 42
H85-40	TB. 29
H90-70	TB lava, Closed Canyon Formation. 24
Tr 34	TB lava, Las Burras Lavas, Rawls Formation, next flow below Tr 32 and Tr 33. 69
SI 8395	Te-bas intrusion south of Black Hills. 19
Ra 9-1	TB lava, Closed Canyon Formation. 37
H91-134	TB lava, Closed Canyon Formation. 24
1049	TB, Rawls Formation, Wire Gap Road. 23
H91-100	TB lava, Alazan Lavas Member, Rawls Formation. 24
H91-50	TB lava, Sauceda Lavas Member, Rawls Formation. 24
H82-85	PT. 37
H91-213	TB, intrusive. 24
H91-93	TB lava, Sauceda Lavas Member, Rawls Formation. 24
J 9	TB lava, Las Burras Lavas, Rawls Formation, near large cave. 69
H82-81	PT. 37
IB-C	B lava, Las Burras Lavas, Rawls Formation, below large cave; different flow than J 9. 69
H91-135	TB, intrusive. 24
Tr9-1	B lava, Closed Canyon Formation, hill south of rte 170, 3 km west of Panther Creek. 69
BFB	TB, highly vesicular plagioclase-phyric lava "low in Rawls section", Agua Fria quadrangle.
H92-79	TB lava, Closed Canyon Formation. 24
H91-102	TB lava, Alazan Lavas Member, Rawls Formation. 24
J 4	B lava, Las Burras Lavas, Rawls Formation, near spring in Las Burras Canyon. 69
IB-L	B lava, Las Burras Lavas member of Rawls Formation, elevation 2630 west of stream bed near small cave. 69
BM 6	TB lava, Rawls Formation, River Road, 4.5 miles NW of Big Hill. 23
H92-25	TB, intrusive. 24
MGD 566	TB lava, Closed Canyon Formation. 24
E90-20A	TB, intrusive. 24
H82-86	PT. 37
H91-198	TB lava, Alazan Lavas Member, Rawls Formation. 24
BM 5	TB lava, Closed Canyon Formation, on River Road 4 miles NW of Big Hill. 23
Tib 2	TB, dike cutting upper Rawls Formation on TX 170, opposite Colorado Mesa. 37
E90-23	B lava, Las Burras Lavas, Rawls Formation. 24
MGD 567	TB lava, Closed Canyon Formation. 24
H92-81	TB lava, Closed Canyon Formation. 24
Tr 35	TB lava, Las Burras Lavas, Rawls Formation, flow below Tr 34. 69
Tr 28	TB lava, Closed Canyon Formation, elevation 2600, near river access on rte 170. 69
H91-105	BTA lava, Sauceda Lavas Member, Rawls Formation. 24
Tr 18	TB lava, Las Burras Lavas, Rawls Formation, elevation 3520, west of stream bed in canyon east of Rancherias Canyon. 69
E90-29	TB lava, Las Burras Lavas, Rawls Formation. 24
CXMT-1	TB lava flow, top of Cox Mountain, near Sierra Blanca. 37

H91-49	BTA lava, Sauceda Lavas Member, Rawls Formation. 24
77040	B lava, Black Gap
77041	B lava, Black Gap
77042	B lava, Black Gap. 37
H91-22	BTA, related to Rawls Formation. 24
J 8	BTA lava, Sauceda Lavas Member, Rawls Formation, northwest of large cave, across arroyo. 69
H91-103	BTA lava, Sauceda Lavas Member, Rawls Formation. 24
La Viuda	PT intrusive plug, La Viuda, Tascotal Mesa quadrangle.
